

# Crafting

---

## Crafting Basics

Must know a Recipe to craft

Roll = Stat Rank × d6 + modifiers

**Success** = Roll Total – Crafting DC

**Item HP** = ((Density × 2) ÷ Block Material Weight) + Crafter Success

**Item DR** = (Hardness × 2) + (Ductility × 1)

Masterwork: Success Margin ≥ 10 grants special bonus (per recipe)

---

## Actions by Skill Rank

Each rank in a crafting profession grants specific capabilities and efficiencies that shape the player's toolkit. These actions define what a crafter can do during downtime, in workshops, or in the field.

### Level 1: Novice

- Craft Common-tier items.
- Use basic toolkits relevant to profession.
- Identify quality and materials of items.
- Salvage basic components from broken gear.

### Level 2: Skilled

- Craft Uncommon-tier items.
- Reduce time required for mundane items by 50%.
- Repair damaged items of matching profession.
- Apply 1 Modular Upgrade to an item.

### Level 3: Professional

- Craft Rare-tier items.
- Combine two material types (e.g., metal + bone).
- Apply 2 Modular Upgrades to an item.
- Reduce material cost by 25% for matching items.

### Level 4: Master

- Craft items requiring multiple professions if secondary skills are Rank 2+.
- Apply 3 Modular Upgrades to an item.
- Create Custom Templates for gear variants.
- Gain 1 reroll per project on a failed crafting check.

### Level 5: Artisan

- Craft Epic-tier items (Legendary if assisted).
  - Perform enchantment or refinement without workshop (field-ready crafting).
  - Instill signature traits into a crafted item.
  - Reduce DC by 2 for all related profession checks.
-

## Advanced Crafting Requirements

Some advanced items require multiple professions. Here are some examples:

- Flameforged Longsword = Smithing + Enchanting
- Healing Turret = Engineering + Alchemy
- Ghostmantle Cloak = Tailoring + Enchanting
- Runewood Bow = Carpentry + Enchanting
- Corrosive Bolts = Engineering + Alchemy + Smithing

Characters may gain multiple crafting skills or collaborate with others to complete multi-discipline projects.

## Basic Crafting Workflow

1. Blueprint or Known Recipe
  - Required unless crafting a common mundane item.
  - Blueprints reduce the DC and time required.
2. Required Tools
  - Tools relevant to the skill must be available.
  - Example: Forge for Smithing, Alembic for Alchemy.
3. Raw Materials
  - Based on item complexity and material type.
  - Ex: Iron Ingot, Oak Wood, Troll Hide, Fire Salts
4. Crafting Roll
  - Roll: Roll 1d6 per point in the chosen Stat (BDY, MND, or SPT) and 1d6 per rank in the relevant Crafting Skill. Compare against Recipe DC.
5. Time Investment
  - Crafting takes time units:
    - Mundane: 10 min – 2 hrs
    - Complex: 4 hrs – 2 days
    - Rare/Unique: 1 week+
6. Results
  - Success = item crafted or upgraded.
  - Critical Success = improved stats or effect.
  - Failure = wasted time, partial loss of resources.
  - Critical Failure = dangerous outcome (explosion, self-injury, cursed item).

---

### Item Quality Tiers

| Tier      | Difficulty | Description                  |
|-----------|------------|------------------------------|
| Common    | 4          | Simple tools, basic gear     |
| Uncommon  | 6          | Martial weapons, light armor |
| Rare      | 8          | Elemental/alchemical items   |
| Epic      | 10         | Magic gear, improved tech    |
| Legendary | 12+        | Named or unique items        |

---

### Masterwork Tiers

If the highest rolled die in a crafting check exceeds the Difficulty by 2 or more, or if multiple dice show 6, the item may become Masterwork. Masterwork tiers apply to gear at Uncommon tier or higher.

| Masterwork Rank | Trigger                               | Benefits                                         |
|-----------------|---------------------------------------|--------------------------------------------------|
| Basic           | Exceeds DC by 4+                      | +1 to core function (damage, DR, duration, etc.) |
| Greater         | At least two 6s in the dice pool      | Grants 1 Modular Upgrade at no cost              |
| Superior        | Exceeds DC by 10+ with Rare Materials | Doubles 1 property (range, HP, effect size)      |
| Mythic          | Exceeds DC by 10+ Legendary materials | Gains unique name, +2 core stat, and aura effect |

Note: Items cannot be re-crafted into masterwork after the fact — they must be forged as such.

### Profession Tags

Each craftable item lists which professions may build or contribute to it:

- Smithing – Weapons, armor, metal tools
- Alchemy – Potions, bombs, enhancers
- Engineering – Traps, machines, crossbows
- Tailoring – Cloth armor, robes, pouches
- Carpentry – Wooden gear, bows, furniture
- Enchanting – Adds magical properties (requires base item)

### Upgrading Items

1. Must meet or exceed original item tier.
2. Base materials and matching toolset required.
3. Crafting DC = Item Tier + 2
4. Critical Success may unlock a bonus trait.

### Ingredient Sourcing Table

| Source Type      | Example Materials                 | Notes                                    |
|------------------|-----------------------------------|------------------------------------------|
| Forest           | Herbs, Animal Skins, Resin        | Requires Foraging or Hunting check       |
| Mountain         | Iron Ore, Quartz, Ice Lichen      | Mining or climbing risk involved         |
| Swamp            | Algae, Toxins, Reeds, Frogs       | Often used in alchemy or poisons         |
| Desert           | Glass Sand, Cactus Extract, Bones | Harsh environment penalties              |
| Underground      | Gemstones, Fungi, Mycelium        | Some components glow or radiate magic    |
| Magical Creature | Dragon Scale, Phoenix Ash         | Rare drops, typically boss-level enemies |

### Modular Upgrade Options

| Upgrade               | Effect                                            | Required Material                  | DC Mod |
|-----------------------|---------------------------------------------------|------------------------------------|--------|
| Sharpened Edge        | +1 to Slash/Stab damage (Weapons only)            | Whetstone or Honing Kit            | +2     |
| Reinforced Grip       | +1 to Parry rolls or Bash stability               | Treated Leather or Bone Plate      | +1     |
| Alchemic Infusion     | Adds fire/acid/ice/electric trait to weapon       | 1 Elemental Vial (per type)        | +3     |
| Flexible Weave        | Reduce armor AP cost by 1 (Light/Medium Armor)    | Treated Silk or Composite Thread   | +2     |
| Spell Conductive Core | Allows MP channeling through item (Wands, Staffs) | 1 Arcane Crystal or Etherium Shard | +3     |
| Resonant Inscription  | Activates bonus on crit or elemental trigger      | Rune Ink & Soul Ash                | +4     |

### Failure Consequences

| Result Type      | Cause          | Outcome                                                      |
|------------------|----------------|--------------------------------------------------------------|
| Normal Failure   | Missed DC      | Lose 50% of raw materials, no item produced                  |
| Partial Failure  | Within 2 of DC | Craft fails, but recover most resources                      |
| Critical Failure | Roll natural 1 | Explosion, fire, toxic effect, item cursed or creator harmed |
| Structural Flaw  | Rare           | Item is crafted but breaks after one use or becomes unstable |

## Crafting Skills

Crafting skills determine a character's ability to produce, upgrade, or enchant items. Each profession grants access to specific item types and unlocks relevant recipes and actions. Higher-tier projects may require multiple professions to complete.

Each crafting profession is a skill with 5 ranks. Unlock new recipes, reduce time or cost, and gain passive bonuses as the skill increases.

## Crafting Rules

### 1. Recipes Are Required

Crafting an item always requires a **recipe**. A recipe defines:

- **Materials:** Includes refined or pre-made components. (e.g. Wood and Iron Arrowhead pre-crafted by a blacksmith).
- **Crafting DC:** The difficulty to successfully create the item.
- **Required skill(s):** The crafting skills used. i.e Blacksmithing or Carpentry
- **Tool Requirement:** Tools and workstation necessary for the craft. (e.g.: Forge, Anvil, Loom).

- **Time Requirement:** The amount of in-world time required to craft the item.
- **Functional Material:** The material used to calculate item stats. (e.g. iron for a blade or plated armor).
- **Critical success effect:** The bonus applied when the crafter exceeds the DC by 10+.
- **Optional upgrades:** Additions that modify weight, DC and/or enhance item stats.

## 2. Recipe Memory Limits

A crafter may memorize a number of recipes for each **crafting skill** based on it's rank:

- **Tool Recipes:** Skill Rank<sup>3</sup>
- **Crafting Recipes (Weapons, Armor, Gear):** Skill Rank<sup>2</sup>

Memorized recipes reduce total crafting time by 25%.

## 3. The Crafting Roll

To craft an item:

- Roll 1d6 per Rank in relevant crafting skill. (Skill Rank may not exceed governing stat: BDY, SPT, or MND).
- Add any bonuses from tools, materials, workspace, etc.

Crafting Success = Total Roll – Crafting DC.

This value is usually added as HP to the item.

Compare your total roll against the item's **Crafting DC**:

- If total ≥ DC → Craft **succeeds**
- If total < DC → Craft **fails**

## 4. Failure Consequences

Failed crafts result in **partial material loss**:

- Missed by 1–3 → Recover 75% of material value
- Missed by 4–6 → Recover 50%
- Missed by 7+ → Recover 25% or less
- Critical failure: If the roll is **10 or more below the DC**, all materials are destroyed.

### Batch Crafting:

- For items like **arrows, bolts, or similar grouped items**, a single roll is made for the entire batch.
- On failure, a **percentage of the batch is lost** instead of the entire quantity.

## 5. Critical Successes

If the roll is **10 or more above the DC**, the craft is a **critical success**.

Each recipe defines its **own bonus** on critical success, and often gives options to choose from. Unless otherwise noted a crafter may only choose one per critical success.

Examples:

- A **spear** might gain **+1 Attack** on crit
- A **dagger** might become **easier to conceal**
- A **club** might gain **bonus HP**
- A **torch** might burn **twice as long**

This allows for greater diversity and flavor between item types.

## 6. Stat Calculations From Materials

Use the Functional Material listed in the recipe to calculate the item's stats.

### HP Formula:

$$HP = ((\text{Material Density} \times 2) \times \text{Functional Material Weight}) + \text{Crafting Success}$$

HP is based on the part of the item used to block or parry.

Items like spears or arrows typically gain Attack bonuses instead of HP increases.

### DR Formula:

$$DR = (\text{Material Hardness} \times 2) + \text{Material Ductility}$$

- Item weight is tracked separately for encumbrance and inventory
